

June 2006 Class 466 EMU mechanical tests

In June of 2006 TestPRO limited carried out a track test programme as specified by Mott MacDonald who are acting as engineering consultants for the vehicle owners, Angel Trains.

The tests involved the application of strain gauges, accelerometers and other transducers to the under-frame of the motorcar. Both cars of the test vehicle were ballasted at Slade Green depot and tested over an extensive route from the Southeastern network.

TestPRO Limited is delighted to have supported this project by providing a cost effective testing service as an essential part of the design review process.
