

Northern Line Dynamic track testing

In December 2007 TestPRO Limited was involved in a dynamic track test to determine the levels of strain and acceleration experienced by the shoe beam during a track test covering the entire Northern Line operating route. as specified by Tube Lines Fleet Health and Reliability Group.

The 1995 tube stock vehicles are operated on the Northern Line Underground from Golders Green depot and were originally supplied by ALSTOM Transport (Metro Cammell), Birmingham.

TestPRO Limited is delighted to have supported this project by providing a cost effective testing service.
